

"Customers are the most important visitors on our premises. They are not dependent on us, we are dependent on them. They are not an interruption in our work, they are the purpose of it. They are not an outsider in our business, they are the part of it. We are not doing them the favor by serving them, they are doing us a favor by giving us the opportunity to do so."

STONE UNIVERSE INC. **NATURAL STONE**

Product Catalog **Volume -20**

ABOUT STONE UNIVERSE

Stone Universe Inc. is one of the biggest natural stone wholesalers in the United States. Our journey began in 1999 as a wholesale distributor of natural stones in Gilroy, California. Shortly, began the expansion of natural stone products with a focus on hardscaping. Over the years, we added a number of products like flagstones, pool coping, wall caps, column caps, driveway pavers, etc. in a wide variety of colors and finishes to meet the standards of the industry.

All the products until this point were imported from India. In 2010, we took a step further by introducing products from China. The increasing demand for products and the growth of the company stipulated the need for a bigger facility. In 2012, Stone Universe moved to a bigger location in San Lorenzo, California and this year also marked the introduction of travertine products from Turkey. While the product lines increased steadily, to facilitate the distribution of products throughout the country, Stone Universe established distribution centers in different parts of the country. Apart from corporate location, four other distribution centers were established in a span of three years with a steady growth.

We offer a wide range of products - pool coping, column caps, wall caps, pavers patterns in different sizes and finish, treads, driveway pavers, cobblestone, flagstone, ledge stones, slabs, etc. which is ideal for both indoor and outdoor applications for projects of various sizes. Every year we introduce new products.

DISCLAIMER

Variations in color,
texture, veining, clefting, etc.
is an aspect of natural stones &
should not be considered as flaws.

Natural Stones are composed of minerals
which makes it susceptible to various chemicals &
harsh environments. Exposure to elements like sun, rain,
snow, etc. over a period of time can affect the look of natural
stones. Some of the most common effects include oxidation (or
rusting), flaking, weathering, etc. We strongly discourage the use of acidic
cleaners and suggest seeking professional help if necessary. It is recommended to
seal natural stones periodically to reduce environmental effects.

All our products have dimensional tolerances which are an industry
standard. Further, we recommend using the standard installation
process and sealers recommended by the American National
Standards Institute(ANSI) for natural stones as the
processes vary from installer to installer. It is
extremely significant to inspect the material
before fabrication or installation as we do
not take any liability once the
product is altered or installed.

**NATURAL STONE
DISCLAIMER**

Why Natural Stones?

ENDURANCE

Natural stones are one of the oldest building materials in existence. The use of natural stones can be traced back to the great pyramids of Egypt, the streets of ancient Rome, architectural buildings like the Colosseum, etc. With regular maintenance and care, natural stones have the potential to last literally for decades.

UNIQUENESS

Natural stone encompasses a wide variety of materials like Limestone, Sandstone, Slate, etc. each with its own unique properties, color and texture. The presence of impurities gives inimitable color variation in every piece of stone with a rich textured appearance. Every piece of stone is unique yet maintains a comprehensive overall appearance.

AGING.

One advantage of using natural stone is the character of the natural stone changes with age as the stone wears, fades and matures. The weathering effect that occurs with years of use is often considered attractive. Weathering can also be prevented by periodic application of stone sealers on a regular basis.

ECO-FRIENDLY

Natural Stone is an organic product quarried from the earth and is available in abundance. Natural stone does not contain any harmful chemicals and ensures a safer environment. Further, natural stones can be salvaged, reused, and recycled.

EASE OF MAINTENANCE

With the use of recommended cleaners and sealing the stone on a regular basis, makes it relatively easy to clean. With little care and precautions, the natural beauty of the stone can be preserved.

The above-mentioned advantages of natural stone make it a popular choice of material for construction and architectural purposes.

BASALT

Basalt is an igneous, volcanic rock that is produced by hardened lava. Basalt is mafic, which means it contains minerals with significant iron and magnesium. Other minerals making up basalt include pyroxene, plagioclase feldspar, amphibole, and olivine.

Basalt historically was used in street pavers & stadium seating in ancient Rome. Today, basalt finds its use in several industrial applications, including building materials and thermal insulators. They are used as aggregates to increase the strength of concrete, asphalt paving and rock filtering, agents. Additionally, they are used as wall panels, countertops, and fireplaces among others due to high abrasion resistance & compressive strength. They are also great as interior decoration & decorative stone. The insulating property is one notable characteristic basalt, its insulation value is three times more than asbestos without any toxic hazards. High tensile strength, vibration resistance, and durability make it an ideal choice for hardscaping.

BASALT

Basalt has a color range from charcoal grey to black. Basalt is a metamorphic stone, very dense, and durable which makes good paving material. A flamed top, unique lightly textured surface offers a slip-resistant surface that complements a wide variety of applications.

FINISH : Thermal finish, edges are saw-cut, chiseled or a mixture of both depending on the product.

QUARTZITE

Quartzite is a hard, non-foliated metamorphic rock formed from pure quartz sandstone. Sandstone is converted into quartzite due to heat and pressure of tectonic compression of the earth's crust. Pure quartzite is usually white to grey, though quartzites often occur in various shades of pink and red due to the presence of iron oxide in varying amounts. Mineral impurities change the color of stone to yellow, green, blue and orange, etc.

Quartzite is extremely durable and makes it suitable for use in most demanding applications. Quartzite is harder than granite & marble, it stands up better to abrasion in stair treads, floor tiles, and countertops. It is also more resistant to most chemicals and environmental conditions. The glossy surface and the color variation makes it a suitable choice for decorative and landscaping purposes. It is most commonly used in indoor flooring, countertops and fireplace surround.

ANTIQUE GOLD

Antique gold is tumbled quartzite showcasing a blend of shimmering colors like gold, pink, brown, turquoise, etc. to form unique random patterns within the project while maintaining a comprehensive overall appearance. The high comprehensive strength of quartzite makes it suitable for a wide range of applications.

FINISH : Tumbled finish, edges are saw-cut or smooth edges.

SLATE

Slate is a fine-grained, foliated, homogeneous metamorphic rock obtained from a sedimentary rock of type shale (composed of clay or volcanic ash) under relatively low pressure and temperature conditions. Foliation refers to repetitive layering in metamorphic rocks. Slate is characterized by fine foliation along which it breaks to leave smooth, flat surfaces. The color of a slate is determined by its mineral composition. Slates usually range from shades of light to dark grey in color.

Slate is widely used for external flooring, internal flooring, and cladding. Slate floors are commonly laid in outdoor porches, basements, bathrooms, and kitchens. Internal slate floors are durable, versatile and elegant. The natural variation of slate allows homeowners and interior decorators to create unique, one-of-a-kind environments. Slate floors are durable, nonporous, and require little maintenance. Due to foliation, when the slate is chiseled, it creates a distinctive elegant look compared to other natural and artificial stones which makes it a popular choice for wall caps and column caps.

Slate Disclaimer :

Water can seep in between layers of slate. In weather conditions where water is subjected to freeze/thaw, due to thermal expansion, the compressed layers begin to split and deteriorate. Not all slates are Freeze/Thaw resistant, so it's highly recommended to seal your product.

SANDSTONE

Sandstone is one of the most common types of sedimentary rock and is made up of three components - sediment particles, matrix, and cement. The sediment particles are pieces of minerals and fragments of rock. Matrix is a fine material that is present between the sediment and cement is the secondary mineral that binds the sediment to rock.

Sandstone displays a lot of character, depending on the mix of matrix and cement, it portrays a wide range of colors from white to black, with gray, brown, red, pink and buff in between. It is durable and versatile, which makes it an ideal choice for indoors and outdoors. Sandstones are used in indoor settings such as flooring, kitchen countertops & backsplashes. Because of its natural ability to regulate heat, sandstone makes for excellent paving, especially for pool sides. It's naturally non-slip, stays cool under foot in the summer and radiates heat in the winter. It can be used to build outdoor ovens, fireplaces, patios or porches, retaining walls and walkways.

Disclaimer :

The hardness of sandstone varies depending on the binding material (cement). If the sediment particles are cemented by calcite, the sandstone will seem softer.

LIMESTONE

Limestone is a sedimentary rock composed primarily of calcium carbonate in the form of the mineral called calcite. It can contain considerable amounts of magnesium carbonate along with clay, iron carbonate, feldspar, pyrite, and quartz in small amounts.

Limestone is known as a heavy, hard-wearing stone with a lightly textured surface which makes it an excellent material for patios. It's a very dense and durable stone and its use in architecture can be traced back to the pyramids of Egypt. There are hundreds of types of limestone available in different colors, textures, and varying degrees of permeability making it aesthetically versatile. Limestones are extremely versatile as you can use them in a vast range of outdoor areas including patios, pathways, courtyards, verandas, poolside and stepping stones. Some types are better suited for flat exterior surfaces than others. Furthermore, it has a naturally non-slip surface making it perfectly safe for areas that might get wet such as around pools, hot tubs, and ponds.

Disclaimer :

Efflorescence is a crystalline deposit of salts created when water is present especially on limestones. Efflorescence diminishes the color and brightness of the surface giving a false notion that the stone has begun to fade when these deposits overshadow their original hue and shade.

TRAVERTINE

Travertine is a form of limestone formed by the precipitation of carbonate mineral solution in ground and surface waters. Exposure to heat causes the evasion of Carbon dioxide from the alkaline solution leaving behind holes on the surface. This reduces the solubility of carbonate, making it precipitate.

Travertine has been used for centuries to build exquisite architectural marvels that are still standing to this day, the most famous Coliseum also known as the Flavian Amphitheatre in Rome. Its proven durability and lasting beauty have continued to prompt builders and homeowners to choose travertine tiles or pavers in modern building projects. Travertine is so versatile; it can be used in a number of places both inside and outside. While regular maintenance and care are required with travertine floors, these materials have the potential to last a long time. Travertine tiles are a great choice when it comes to floors and walls of kitchens, hallways, and bathrooms. The exterior elements like walkways, sidewalks, patio, swimming pool, and exterior walls, etc. can be built using travertine

Disclaimer :

Travertine is a porous stone and the surface will have visible pores. The pores are the inherent nature of the stone which adds a unique look to the stone and should not be considered as defects.

LEDGE - PANEL CORNER

GLUE BACKING $\frac{3}{4}" \pm$

Ledgestone or stack stone are stripes of natural stone arranged uniformly on a mesh to form a veneer. The ledge stone panels are "Z" shaped designed to interlock with one another. It comes with matching "L" shaped 2-piece corner pieces to provide a beautiful finish on the edges. Ideal for retaining walls, facades, and fireplaces to boost the overall appearance of the terrain.

TREADS

Finish - 3 Side saw cut & 1 Long side rock face

Treads are long rectangular capstones used on stairs, front doorsteps, wall capping, and pool coping. The length of the tread can minimize the number of grout joints for a flawless design structure. Additionally, they can be used as mantels and hearths for fireplaces. Three sides of the treads are saw cut while the fourth side is chiseled for a dramatic overall appearance.

ETHICS & SUSTAINABILITY POLICY STATEMENT

Imported natural stone are not only beautiful, it is a cost-effective choice for your dream project. When choosing an imported natural stone, it is important to choose a company that adheres to the Ethical Trading Initiative (ETI). Stone Universe cares deeply about this initiative and the ethical sourcing of all the material. Stone Universe Inc. has developed strict policies and guidelines to ensure that all our stone products are harvested and fabricated in environmentally sustainable ways, and that our stone is ethically produced.

We expect everyone we do business with – from our suppliers to retailers – to be responsible and proud of the safe working conditions provided by the Global Trade Initiative and Human Rights Standard.
